

# HITEC

High Temperature  
Free Filament Gages

HF-Series free filament strain gages are the result of 30 years of elevated temperature strain gage installation experience. Free Filament gages are suitable for dynamic and static stress measurement. Also can easily be used on carbon composites.

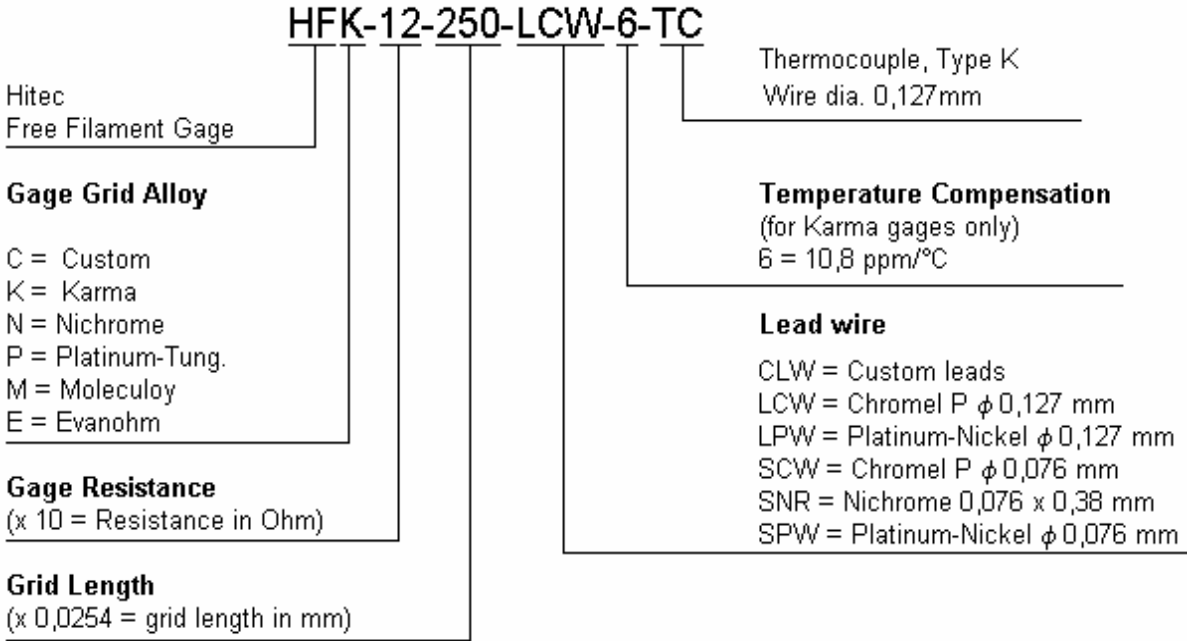

**Typical applications are measurement on:**

- Gas turbines
- Exhausts of cars and trucks
- Compressor blades
- Safety of piping in power plants
- Research in nuclear reactors

**Features:**

- Temperature range up to 980°C
- Grid length 0,7 to 6,35 mm
- Resistance 100, 120, 200 and 350 Ohm
- Custom configurations
- Flame spray or ceramic cement application
- Can be used on carbon composites
- Integral Thermocouple Type K, optionally available

**Designation Code**

\* "No shelf life" version with flat grid available.
